FRONTIER AT RESEARCH TRIANGLE PARK

half a million square feet of creative work spaces

Begun as an experiment to lease office space to small businesses and startups in 2015, the Frontier building concept has been so successful that it is now considered a campus at Research Triangle Park. The expansion houses 100 companies—1/3 of the total in RTP—in an affordable, amenity and program packed innovation center.

In May 2020, the community will be enhanced with the opening of Boxyard RTP to extend the creative culture of the Frontier campus to retail, food and beverage, all clustered around a programmable outdoor entertainment venue for concerts, lectures and fun – and dog friendly to boot!

President and CEO, Steve Levitan shared his excitement about the project with us: “This first phase of HUB RTP will expand by 2023 to include the first residential community ever in RTP, supported by offices and additional retail focused on a main street and recreational stream experience that will attract workers and the surrounding communities to recreate in RTP.”

Scott Levitan
President & CEO, Research Triangle
Foundation of North Carolina

AMERICAN TOBACCO CAMPUS

the largest historic renovation in the state

When we began the renovation of the American Tobacco Campus, we weren't sure if this project would be successful. Downtown Durham had serious challenges and no private developers were considering redevelopment here. But ATC has gone from a major risk to something we see as a generational project. American Tobacco is now the largest historic renovation project in the state at over 1 million square feet and home to companies like Burt's Bees, Avalara, and our nation's most diverse startup hub, American Underground. Our partnership with the County of Durham made this project possible and we're glad to call them partners.

AVEXIS

world-leading gene therapy manufacturing

Rob May
Vice President & Durham Site Head,
AveXis

A leading gene therapy company, AveXis is dedicated to developing and commercializing gene therapies for patients and families devastated by rare and life-threatening neurological genetic diseases.

When looking at options for growing their business with a new office location, Vice President & Durham Site Head, Rob May says the company was attracted by "Durham County's access to a premier workforce, particularly in the field of biotechnology, necessary to support our company's rapid growth and mission."

As a new partner for Durham County, AveXis states it is committed to partnering with local organizations to support local workforce development efforts.
