Bio-Retention Area Design Summary

Stormwater Management Construction Plan Review:

A complete stormwater management construction plan submittal includes a design summary for each stormwater BMP, design calculations, plans and specifications showing BMP, inlet and outlet structure details.

I. PROJECT INFORM	IATION		
Project Name:		Phase	
PIN:	Case #:	Phase	
Design Contact Person:		Phone #: (_)
Legal name of Owner:			
Owner Contact:		Phone #: ()
Owner Address:			
Deed BookPage	e # or Plat Bool	c Page#	for BMP Property
For projects with multiple	le basins, specify which	pond this worksheet appli	ies to:
Drainage area	ac	(on-site drainage to th	e area, 1-acre max ¹)
Impervious area			
Design runoff	_		<i>,</i> , , , , , , , , , , , , , , , , , ,
Design runoff Design treatment volume	$e = _{ft}^3$		
Bioretention Design			
Grass buffer strip width	ft	(Max slope of 4:1 and n	ninimum width of 10 feet or a forebay,
Size of cell area			rea with sand bed, 7% without bed)
Depth of ponding area	ft		
Width of cell		(Minimum width of 25-f	reet ²)
Length of cell		(Minimum length of 2 ti	
Inflow sheet flow velocit		s (Maximum of 1-foot/sec	
Mulch layer elevation	=	(Elevation of top of laye	
Planting soil top elevation	on ft	(Elevation of top of soil)	
Depth of planting soil	ft	(Minimum depth of 4-fe	et^3)
Top of sand if applicable		(Elevation of top of sand	
Bottom elevation	ft	(Elevation of bottom of	cell)
Perforated pipe length	ft	(Length of perforated pi	ipe provided under cell layers)
Space between pipe runs	ft	(Spacing between per	forated pipe runs, max of 10-feet)

² Smaller widths may be accepted in urbanized areas or in retrofit situations. These designs will be evaluated on a case-by-case basis.

³ Smaller depths may be accepted in urbanized areas or in retrofit situations. These designs will be evaluated on a case-by-case basis.

Emergency outlet elev. It. REQUIRED ITEMS CHECKLIST The following checklist outlines design requirements. Initial in the space provided to indicate the following design requirements have been met and supporting documentation is attached. Applicant's initials	Longitudinal Diameter of p	
Emergency spillway width ft. side slopes 1 slope % H. REQUIRED ITEMS CHECKLIST The following checklist outlines design requirements. Initial in the space provided to indicate the following design requirements have been met and supporting documentation is attached. Applicant's initials a. Runoff from landscaped areas and other non-impervious areas has been directed away from the bioretention area to the maximum extent practical. b. Drainage area for bioretention area is less than 1-acre. c. Plan specifies how all slopes draining to the bioretention area will be stabilized, note that the slopes must be stabilized before installation of the under drain system. d. Construction sequencing shall be considered and a note added to the plan that states: "All sediment and erosion control practices shall be in place and the slopes draining to the bioretention area begins." e. No side slopes draining to bioretention area greater than 3:1, promote sheet flow through the grass filter strip. f. Riprap outlet protection, if provided, reduces flow to non-erosive velocities (provide calculations). g. A recorded drainage easement is provided for each cell including access to the nearest right-of-way and is graded per Section 8.3, Stormwater Control Facilities (BMPs). h. A plan view of the bioretention area with grading shown is provided. i. A profile through the bioretention area and emergency spillway is provided. j. Geotextile fabric is placed at the bottom of the excavated cell to prevent soil from getting into the underdrain system is wrapped in a gravel jacket and a geotextile fabric is placed between the bottom of the sand bed or planting soil and the top of the gravel jacket. l. The pipe for the underdrain system is connected to the underdrain piping and extends to the surface of the planting soil for cleanouts. o. Cleanouts are to be provided at the beginning of each pipe run and at all intersections. p. A planting soil mixture is 8.00%. q. The hydraulic conductivity for the planting mixture is to be 1-i		Emorgoney Spillway Information

Cleanouts are to be provided at the beginning of each pipe run and at all intersections. p. A planting soil mixture specification and a soil characteristics table are provided. Maximum clay content in the soil mixture is 8,00%. q. The hydraulic conductivity for the planting mixture is to be 1-inch to 2-inches per hour. r. Mulch layer specification is provided; mulch is to be a 4-inch layer of coarse hardwood mulch with re-application rate specified. s. Soil with a P index of less than or equal to 25 specified on plan. t. A bioretention area landscape plan is provided including the transport of plant material, preparation of the planting pit, fertilization, installation of the plant material, type and number		
calculations). g. A recorded drainage easement is provided for each cell including access to the nearest right- of-way and is graded per Section 8.3, Stormwater Control Facilities (BMPs). h. A plan view of the bioretention area with grading shown is provided. i. A profile through the bioretention area and emergency spillway is provided. j. Geotextile fabric is placed at the bottom of the excavated cell to prevent soil from getting into the underdrain system. k. The underdrain system is wrapped in a gravel jacket and a geotextile fabric is placed between the bottom of the sand bed or planting soil and the top of the gravel jacket. l. The pipe for the underdrain system shall be perforated Schedule 40 PVC. m. The underdrain system shall connect to the outflow system at a point at least 1 foot inside the bioretention cell wall. n. A non-perforated piping system is connected to the underdrain piping and extends to the surface of the planting soil for cleanouts. o. Cleanouts are to be provided at the beginning of each pipe run and at all intersections. p. A planting soil mixture specification and a soil characteristics table are provided. Maximum clay content in the soil mixture is 8.00%. q. The hydraulic conductivity for the planting mixture is to be 1-inch to 2-inches per hour. r. Mulch layer specification is provided; mulch is to be a 4-inch layer of coarse hardwood mulch with re-application rate specified. s. Soil with a P index of less than or equal to 25 specified on plan. t. A bioretention area landscape plan is provided including the transport of plant material, preparation of the planting pit, fertilization, installation of the plant material, type and number
