

Roy Cooper Governor Ronald G. Penny Secretary

# **MEMORANDUM**

To: Users of the Cost Index and Depreciation Schedules

From: Chelsie Cornelius, Property Valuation Specialist II

Date: November 2, 2021

Re: 2022 Cost Index and Depreciation Schedules

Attached you will find the 2022 Cost Index and Depreciation Schedules. The document is also located online at <u>https://www.ncdor.gov/cost-index-and-depreciation-schedules</u>.

We recommend the use of these schedules in the valuation of business personal property and certain taxable personal property listed as of January 1, 2022.

This year we updated the overall look of the schedule section to improve functionality. In addition, there were a few minor changes this year, other than the usual percent good factor adjustments. These changes are for appraisals as of January 1, 2022, and forward, and are not retroactive. The changes have been marked with an asterisk in the Cost Index and are as follows:

- 1. On Index page 3, under the category *Cable and Satellite Company Equipment*, the assets in the subcategory *Distribution Systems Cable (Coaxial and Fiber Optic)* were moved to the newly created Schedule U-10 for consistency in scheduling.
- 2. On Index page 11, under the category *Petroleum Products Manufacturing*, we updated the description for clarity.

# Reminder(s):

- 1. Schedule N shows a straight-line schedule that depreciates down to zero, for illustrative purposes. However, you should always use a 25% residual when applying Schedule N unless you have analyzed a particular situation and decided a lower residual is warranted.
- 2. Per Session Law 2018-113, NC Farm Act of 2018, counties are <u>required</u> to use the A-10 schedule and 25% residual if valuing equipment under the *Farm and Ranch Machinery and Equipment* category using the cost approach. (If additional depreciation is warranted, the county appraiser may value below the 25% residual.)

501 N. Wilmington Street, Raleigh, NC 27640 PO Box 871, Raleigh NC 27602-0871 Website: <u>www.ncdor.gov</u> An Equal Opportunity Employer In 2005, the North Carolina Court of Appeals affirmed the North Carolina Property Tax Commission's decision in the matter of the appeal of Westmoreland—LG&E Partners from the decision of the Halifax County Board of Commissioners for the tax years 1996-2001. In its decision, the North Carolina Court of Appeals opinion quoted excerpts from the Property Tax Commission's decision. The opinion quotes, "The Tax Administrator properly applied the Cost Index and Depreciation Schedules developed by the North Carolina Department of Revenue..." The Court also writes, "It is well-settled in this State that ad valorem tax assessments are presumed correct." This and other previous cases have solidified our opinion that, when used properly, the Cost Index and Depreciation Schedules are well accepted by the Courts.

These schedules have been prepared by this office as a general guide to be used in the valuation of business personal property, utilizing the replacement cost approach to value. It is important to remember that the schedules are only a guide. There may be situations where the appraiser will need to make adjustments for additional, or less, functional or economic obsolescence; or for other factors.

These schedules are provided to aid in the overall uniformity and equity of property tax assessment practices, as required by North Carolina statutes. If you have any questions about these schedules, please contact the Personal Property Section at (919) 814-1129.

# 2022 Cost Index and Depreciation Schedules

North Carolina Department of Revenue Local Government Division | Personal Property Section

The cost approach is the most widely used approach to valuing business personal property. It is calculated in a manner that gives consideration to both inflation and depreciation in arriving at a final estimate of value. The estimate of value is determined by trending the cost of an asset to arrive at the replacement or reproduction cost new, then reducing that cost to account for depreciation. The cost approach lends itself to mass appraisal and can be readily applied using the information submitted on annual property tax listing forms.

The Cost Index and Depreciation Schedules are recommended for business personal property tax valuation in North Carolina and are supported by the court system. In fact, legislation was passed that requires the use of the published schedule for farm and ranch machinery and equipment. These schedules utilize the cost approach to valuation and serve as a beneficial tool in the appraiser's effort to maintain uniformity in the appraisal of business personal property within a taxing jurisdiction. If the schedules are applied by all counties, uniformity will be achieved statewide.

It is not feasible for county tax appraisers to appraise individual assets for ad valorem purposes. Appraisers must use mass appraisal techniques to arrive at assessed values for property in their jurisdiction. The mass appraisal process values groups of properties with similar characteristics. When utilizing the cost index, the appraiser should value machinery and equipment using the schedule that corresponds with the category of the taxpayer's principal type of business. There may be categories of property not identified in the schedules. In this situation, the appraiser will use their best judgment to determine the proper schedule to arrive at fair market value. The appraiser may also contact the Local Government Division for additional guidance.

As a general rule, the useful life schedules in this publication represent the midpoint of asset depreciation ranges extracted from publications of the Internal Revenue Service, or through special studies. The trend factors are determined using the percentage price increase or decrease over the past year of similar business markets. These percentages come from the latest edition of the Producer Price Index, published by the U.S. Department of Labor's Bureau of Labor Statistics.

This cost index consists of tables that incorporate trend factors and depreciation percentages to appraise business personal property. The resulting figure is a composite conversion factor, which combines the trend factor and the amount of allowable straight-line depreciation based on the vintage year of the asset. The factors are expressed in this manner to eliminate additional mathematical computations in the appraisal process. These factors are labeled in the cost index as the *percent good factors*. The term *percent good* represents the remaining percentage of replacement cost after all forms of depreciation are deducted.

The starting point in the valuation of business personal property is the historical cost of an asset. The historical cost signifies the initial, installed cost of a new asset to its initial user. When assets are purchased new, this cost typically matches the capitalized cost found in

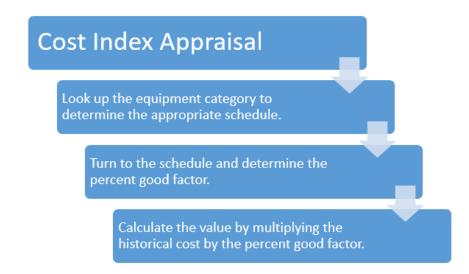

the owner's accounting records. Historical cost is the full economic cost of an asset and includes <u>all</u> costs associated with constructing the asset and making it ready for its intended use.

Property normally increases in value as it progresses through production and distribution channels. The property achieves its maximum value as it reaches the consumer level of trade. It is only at this level that assessment is uniform and equitable. Therefore, businesses that use and consume property they produce or create must list such property at the retail cost of the property at the consumer level, not the manufacturer's cost to produce the property. Property purchased by wholesalers and retailers must also be listed at the retail cost of the property at the consumer level, not the cost paid to acquire the property from the manufacturer or wholesaler.

The cost index recognizes the loss in value from the routine use of business personal property over its economic life. These schedules incorporate typical physical deterioration and conditions of obsolescence. However, appraisers may need to consider adjustments to the final value estimate to account for excessive depreciation under extraordinary circumstances. This may include applying an additional depreciation percentage or lowering the standard residual percentage amount. Before making an adjustment for excessive physical deterioration, or functional or economic obsolescence, the taxpayer must provide evidence that supports the claim. Based on the evidence the taxpayer provides, and/or a physical inspection of the property, the appraiser will determine whether or not a value reduction is warranted.

To produce the assessed value of business personal property, the percent good factor is multiplied by the historical cost. It is very important to remember that the trend factors that are shown in this cost index have already been calculated into the percent good factors. Therefore, you do not apply the trend factor a second time.

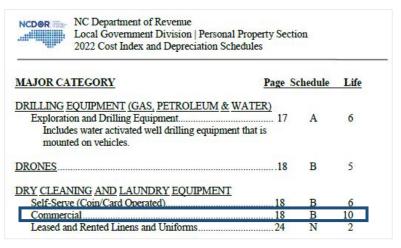

# Example

A taxpayer listed commercial dry cleaning equipment at a historical cost of \$100,000 that they acquired in 2015. What is the value of this equipment on January 1, 2022?

1. Look up the dry cleaning category to determine the appropriate schedule and life.

2. Turn to Schedule B on page 18 and locate the 10 year life column. Use the 2015 acquisition year to find the intersection point with the useful life column and determine the percent good factor.

This category is for non-production computers. It includes personal computers, taxable software, smartboards, midrange and mainframe computers, and their peripherals used for data processing. Includes standard IBM compatible personal computers used in manufacturing and point of sale (POS) systems, but not proprietary POS units, such as computers built specifically to be used as POS computers or other proprietary computerized systems. For POS proprietary systems and electronic cash registers, see *Store Equipment*.

This category <u>does not</u> include computers embedded in machinery, nor does it include equipment or computers specifically designed for use in any other application directly related to manufacturing or retail. It does not include equipment that is an integral part of other capital equipment that is included in other classes of economic activity, such as computers used primarily for process or production control, switching, channeling, and automating distributive trades and services, such as proprietary POS computer systems.

This category <u>does not</u> include equipment of a kind used primarily for the amusement or entertainment of the user.

Note: Accelerated depreciation is used on data processing equipment. The residual is 5%.

# **IDLE EQUIPMENT**

Equipment that has been taken off production status on a permanent basis is considered to be idle equipment. This classification should not be confused with equipment that is temporarily idle due to not yet being placed into production (CIP), a downturn in the economy, seasonal production, routine maintenance, etc. Although we recommend in most cases that some additional depreciation adjustment be made to verified idle equipment, there is no firm guideline as to what adjustment should be made to determine the final value.

In determining the amount of adjustment, the county appraiser must review each situation, taking into account all the factors affecting the property such as age, condition, past and future uses, marketability, remaining life, and reasons for the equipment being idle.
